Sahil Bangar

Application Support Engineer - TCS - SBI

+91 **9082597528** | India | **sahil.bangar.cbstcs**@gmail.com | LinkedIn | Github

Summary

IT professional at TCS with experience in production application support for the SBI project, including Linux/Unix troubleshooting, SQL database operations, log analysis, PR-to-DR file synchronization, and disaster recovery drills.

Experience

Application Support Engineer
February 2025 – Present
TCS – SBI Project *Belapur, India*

- Troubleshoot production incidents, application failures, processing delays, and database discrepancies to maintain service availability.
- Analyze application logs and use Linux/Unix commands to investigate errors and identify root causes.
- Perform SQL-based database validation and routine maintenance using SQL*Plus.
- Monitor application services, server resource utilization, and file-processing jobs to identify operational issues.
- Manage file synchronization between Production (PR) and Disaster Recovery (DR) environments, ensuring successful transfers.
- Execute routine operational checks using Linux commands and Shell scripts while following production procedures.
- Participate in Disaster Recovery (DR) drills to validate recovery readiness and business continuity.

Education

Bachelor of Engineering - Computer Engineer **CGPI - 9.25**
Terna Engineering College - Nerul

HSC **70.7 %**
K M Agrawal College - Kalyan

SSC **84 %**
Don Bosco High School - Kalyan

Projects

- **Linux Server Health Monitoring and Alerting**

  Technologies: Linux, Bash Scripting, Cron

  - **Developed a Bash script to monitor CPU usage, memory utilization, and disk space on Linux systems.**
  - **Automated periodic health checks and generated logs to identify potential server issues.**
  - **Implemented threshold-based alerts to highlight resource utilization anomalies.**

- **CI/CD Pipeline Automation Using GitHub Actions**

  Technologies: Git, GitHub, GitHub Actions, YAML

  - **Configured a CI/CD pipeline to automate application build and testing workflows.**
  - **Implemented workflow triggers on code pushes and pull requests to validate changes.**
  - **Used GitHub Actions logs to monitor pipeline execution and troubleshoot build failures.**

Skills

- **Technical Skills** - Operating Systems: Linux, Unix
- **Scripting**: Shell Scripting (Bash)
- **Database Technologies:** SQL, SQL*Plus, Oracle Database
- **Application Support:** Production Support, Incident Management, Log Analysis, Application Monitoring
- **Disaster Recovery:** PR-to-DR File Synchronization, DR Drills
- **Version Control:** Git, GitHub
- **CI/CD:** GitHub Actions (Foundational Knowledge)
- **Programming Languages:** Java, C++, JavaScript
- **Web Technologies:** HTML, CSS, React.js, Tailwind CSS

Certifications

Linux & Bash Shell Scripting: Foundation for DevOps & Cloud - Udemy
